

Mock Sales deck

databricks

Agenda

How can Databricks capabilities provide a better experience for ICG?

Real-time analytics and streaming
Time-series analytics
Delta sharing

A case study to provide a first-hand account of how effective fully adopting Databricks is for ICG.

Unlocking Value For Your Business Stakeholders.

Richer and more accurate information to allowing better decisions
Allows for process streaming +batch data in one unified platform

Manage market reporting at lower cost and greater accuracy
Power intraday dashboards for risk, liquidity, and performance

Faster real time information to allow faster business decisions to outpace competitors
Reduce latency between data arrival and business action

Provide a market changing experience for your customers while driving internal efficiency
Supports time-sensitive capital-markets workflows

A Single Governance Layer for All Data, Models And AI

Centralised access control across table, files, dashboards and ML models

Automated lineage for full auditability

Supports secure collaboration across teams

Automate ETL Pipelines In A Meaningful Way and Deliver Projects Faster

Declarative pipelines reduce manual engineering work

Built-in data quality checks and monitoring

Supports both streaming and batch workloads

Reduces pipeline failures and operational overhead

LSEG + Databricks — Accelerating AI-Ready Market Data and Agentic Analytics

Problem: market data was delivered slowly which forced analysts to spend more time integrating the data rather than modelling

Solutions: Delta sharing, Agent Bricks + Databricks AI, Unified platform

Impact on LSEG: Faster data onboarding, Accelerated AI production, lower operational friction
